An ASSA ABLOY Group brand

ASSA ABLOY

Linus Yale Jr.
1821 - 1868

About Yale

Created in 1840, Yale is one of the oldest international brands in the world and probably the best-known name in the locking industry. The Yale history captures major innovations that have marked the evolution not just of Yale, but of the entire locking industry.

At Yale, we take great pride in our beginnings. Everything we are today, we owe to the inspirational ingenuity of Linus Yale Senior and Linus Yale Junior.

Yale is a part of the ASSA ABLOY Group. At ASSA ABLOY, we believe that freedom enriches people and that fear makes us poorer. To realize freedom, we must firstly feel safe and secure. That's why the ASSA ABLOY Group of companies is committed to creating high quality door opening solutions.

1840-2020

STILL PIONEERING

Yale is the brand behind locks of every design and function in over 125 countries, since more than 180 years.

All over the world, people are actively securing all they care about; their home, their family, their personal belongings or their business with the name they trust the most - "Yale". That's why we proudly say that Yale is **"the world's favorite lock"**.

Our overall aim is to make our customers feel so safe and secure that they are free to enjoy their life fully, free of worries and free to choose what they want to do.

First Lock Patent from Linus Yale Sr. (Combination Lock, US3312).

1843

1844

Patent from Linus Yale Sr. for a door lock (US3630) with circular pin tumblers.

1847

Linus Yale Sr. built a small lock factory in Newport, USA.

1850

Linus Yale Sr.'s son joined his father in the business.

Linus Yale

Yale patented a safety lock for use in banks.

1851

1857

Yale patented his design for the famous pin tumbler cylinder padlock - still used around the world today.

1868

Relying on Yale patents, Yale's sterling name, and his native ingenuity, Linus Yale Junior and his colleague, Henry Towne, established the Yale & Towne Company in Stamford, Connecticut, at the time employing 35 people.

A line of padlocks was introduced.

YALE PIN TUMBLER PADLOCK

1857 - 65

Granted patents between 1857 and 1865, Yale finally succeeded in creating his most important invention - the Yale cylinder lock. (June 27, 1865, US patent 48475 - round cylinder with five pin tumblers in a line and flat key) Linus Yale Jr. transformed the locking industry forever with his many breakthrough inventions.

After the death of Linus Yale Junior, his son, John B. Yale, joined Henry Towne and helped grow the company from a small shop into a giant manufacturing enterprise.

1879

1894

Yale & Towne established a sales branch in Britain (first British plant).

Yale purchased the UK's largest lock maker H. & T. Vaughan Ltd.

1929

20thC

By the early 20th century, they employed more than 12,000 staff and had expanded into the wider world. Throughout the 20th century purchases, acquisitions and joint ventures with brands as Guli, Parkes and C E Marshall have made Yale locks well-known worldwide.

1963

Eaton acquired Yale & Towne Manufacturing Co.

Yale became a global brand.

2005

1991

Williams Holdings acquires Yale.

2000

In August 2000 Yale was purchased by the ASSA ABLOY Group - the world's leading lock group.

2010

Launch of the first Smart Door Lock in EMEA - Keyfree, for the UK market.

2011

Launch of Doorman in Scandinavia which is the start of a success story for our Smart Door Lock products.

2016

Launch of CCTV in EMEA, part of the Yale Smart Living ecosystem.

2018

Yale Smart Living range is launched in various countries across EMEA. Yale Smart Living is an ingredient brand gathering our range of connected products. It is a range of connected, smart security devices such as alarms and digital door locks and viewers that allow you to protect your home and loved ones from almost anywhere in the world through intuitive user-friendly apps.

Yale Living

Yale in the Middle East

1940 - 2020

About Yale Middle East

Yale ME is the market leader in residential security solutions and offers an extensive range of products catering to the varied demands of the market. The products are handpicked from millions of product combinations globally, ranging from mechanical locks, smart products like alarms and cameras to door solutions and connected smart locks; and adapted to meet the diverse needs of consumers across the Middle East region. Yale first set foot in the Middle East with Lebanon in 1940, and today, has physical presence in 14 countries through some of the region's top distributors, and online presence with key ecommerce accounts.

Yale ME not only offers its customers high quality products, but also ensures they enjoy an excellent after-sales experience. With an expert team of professionals trained on the latest products and technology, and a warranty period of 1-10 years across its products, Yale aims to instill trust and a sense of security for its consumers across the region, as these values are at the core of what we do.

Our customer care team is always available at your service - please call our toll free number for any assistance on Yale products.

Open the Door to Happiness

Doors are an integral part of our everyday lives. You open, close and pass through multiple doors every single day - when you enter or leave your home, your bedroom, or the office for instance. It's the first thing you come in contact with when you enter a home, and the last thing before you exit.

Yale offers you a diverse range of high quality residential door fittings that not only blend perfectly with your door, but aesthetically enhance it to create a lasting impression.

Choosing the Right Residential Door

Making decisions about your door hardware can be tricky - they should fit the needs of your home, while blending in with your interiors. Listed below are some of the most important factors you need to consider while choosing a residential door.

Right surface finish

What will the door inlay be?

Door leaf shape

Which material to use for the door frame?

Choosing appropriate door fittings

This is where Yale comes into the picture and makes it easy for you, offering you door hardware that is known for its excellent technology, usability and high-class design. Door fittings are crucial for the smooth functioning of the door in everyday use. Hinges ensure the doors are fitted well to the frame, door closers give you the privacy you need - and the most important part, the locks ensure the security of your home. The product range from Yale includes door hanging hardware like hinges, door closing fittings like door handles (available in different shapes and finishes), door locking solutions like mortice locks, rim locks, sliding door locks and cylinders (available in different grades of security), door accessories, and lastly, certified fire-rated door hardware for special application fire exit doors.

Doors under the Scope of Yale Ironmongery

1 Entrance Door

The entrance door is the most crucial door of every house – not only to leave a good first impression on your guests, but most importantly to provide security from break-ins. Yale offers a diverse range of high security locking solutions, including patented cylinders, fire-rated door hardware solutions and high performance door control devices.

2 Bedroom Door

We usually spend a lot of time and effort on customizing our bedrooms; then why not customize our bedroom door too? Take your pick from Yale's designer lever handles range that perfectly compliment your bedroom interiors and mortice locks that match your privacy needs. Yale also offers cylinders with knobs for convenience and easy access.

3 Balcony Door

Yale offers a wide range of narrow mortice locks for glass framed balcony doors. The single cylinder from Yale is a smart way to lock the door from one side only (i.e. inside of the house) and leave no chance of security breach from the external side of the door.

4 Bathroom Door

Bathroom door locks play an important role, not only for providing privacy, but also in times when you need emergency access to the other side. Yale emergency locking cylinders give peace of mind to consumers who share their home with kids or elderly people as they can be easily opened with a coin or a screw driver in case they are unable to open the door from inside. Yale also offers other bathroom door accessories and SS 316 grade hinges for humidity & water resistance.

5 Panic Exit Door

In case of a fire or any other emergency situation, safe egress saves lives, and in such situations, panic exit devices play an important role in ensuring that people exit safely when needed. The PED range from Yale comprises of versatile solutions including single door and double door application, push bar and touch pad devices.

Know Your Door

Weight Calculation of a Door

Measure Door Height (In Mtr.)	H
Measure Door Width (In Mtr.)	W
Measure Door Thickness (In Mtr.)	T
Select Door Density (m³) As Per Material (F)	F
MDF – 800	
Particle Board – 700	
Plywood – 600	
Flush Door – 500	
Glass/Mirror – 2500	
Acrylic - 1200	

Calculate Door Weight (Kg.)
H x W x T x F

Door Direction

Depending on the pivot direction of a door, a door is classified as a left or right hand door. The door direction or side definition is according to the German standard DIN 107. Please note that this standard is different as compared to ANSI definition for left and right hand. Visible position of the door hinges on the left = DIN left and visible position of the door hinges on the right = DIN right.

Parts of a Door

- 1 Top Rail
- 2 Bottom Rail
- 3 Hinge Stile
- 4 Panel
- 5 Lock Rail
- 6 Door Frame
- 7 Latch Stile
- 8 Mullion
- 9 Lockset
- 10 Threshold
- 11 Door Seal

Door Hinges

A hinge is a mechanical bearing that connects two solid objects, typically allowing only a limited angle of rotation between them. This is the first product in the door hardware category which is used during the installation of a door. For the smooth functioning and operation of a door, Yale offers hinges with ball bearing technology available in SS316, SS304 and SS201 grades of stainless steel.

Parts of Hinges

● Yale follows this specification of hinges.

Drilling Pattern in Hinges

Zig-Zag (Congruent) Drilled Pattern
To avoid split of pin wood or any soft wood during installation

Template Drilled Pattern

- Need for accuracy fixing
- Allows doors to be pre-prepared
- Follow the pattern as per ANSI 156.7
- Used for hardwood & metal doors

Straight Line Pattern
Used in hinges' flanges which are too narrow

● Yale follows this specification of hinges.

Hinge Mounting Position Recommendation

In the EN standard for hinges (EN 1935:2002) it is not specified where a hinge has to be fixed exactly. The recommendation shown below is only a guide and should be provided always as per the door specifications.

- Figure 1:** Use for medium weight doors. The benefit of this solution is that door will be held straight and wont warp.
- Figure 2:** Use for heavy weight doors. This alternative is recommended when door closing device is fixed on the door.
- Figure 3:** Use for door height over 2,100mm. This solution is for constructions with a high risk of door warping.
- Figure 4:** Use for door height over 2,100mm. This version is especially recommended when door closers are fitted on the door.

Adjusting the Door Weight

Normally, three hinges are fitted to each door. Their positions are determined by the weight of the door and its resistance to warping or whipping. Hinge specification is also determined by the adjusted door weight (based on the actual weight supplied by the manufacturer). The factors by which the door mass has to be adjusted for excessive widths of door are calculated by dividing the door height by its width. For a factor of 2 or greater, no allowance has to be made. When the factor is less than 2, the door mass has to be increased by the value required to bring the factor to 2 expressed as a percentage. These percentages are shown in the side loading calculations table below.

Door size		Factor	Normal increase of Door Height mass of door leaf %
Door height mm	Door width mm		
2,000mm	1,000	2.00	0
	1,050	1.90	10
	1,100	1.82	18
	1,150	1.74	26
	1,200	1.66	33
	1,250	1.60	40

Doors of excess width, please refer to loading calculation table		
Actual door weight	Door closer + 20%	= Adjusted door weight
	Door closer (Backcheck) + 75%	
	Extra heavy use + 10%	
	Light use - 10%	

Additional tables to aid understanding of EN 1935 2002
Digit 8 - hinge grade, regarding information on door mass and test cycles:

Table B shows the mass range of typical doors

Door type	Mass kg	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0 - 10.0	Light
Light internal, large wardrobe and large louvered doors	10.0 - 17.5	Light
Medium internal doors	17.5 - 25.0	Medium
Heavy internal doors	25.0 - 37.5	Medium
Heavy external doors	40.0 - 60.0	Heavy
Oversize or special external doors	55.0 - 110.0	Heavy

BS EN Standards for Hinges

Below table gives estimated number of operations of typical doors and use. Failure to assess the likely frequency of operation of a door could lead to the specification of inadequate hinges and subsequent problems.

Door type	Cycles / day	Cycles / annum
High use/high duty situations:		
Large department store entrance	5,000	1,500,000
Large office building entrance	4,000	920,000
Cinema or theatre entrance	1,300	455,000
School entrance	1,250	225,000
Entrance door to school toilets	1,250	225,000
City centre shop entrance	1,000	300,000
Large city bank entrance	1,000	250,000
School corridor fire door	600	108,000
Town bank entrance	500	150,000
City centre restaurant entrance	500	150,000
Large office corridor fire door	450	104,000
Town centre shop entrance	400	120,000
Large office or factory toilet entrance	400	92,000
Hospital ward door	350	128,000

Door type	Cycles / day	Cycles / annum
Medium use/medium duty situations:		
School classroom door	80	15,000
Office door	75	18,000
Store toilet door	60	18,000
Dwelling front entrance	12	4,400
Dwelling rear or side door	15	5,400

Standards

This standard provides details on product types, classification by use, test cycles, door mass, corrosion resistance, as well as definitions, product performance requirements, test apparatus, test methods and marking of products. In addition, the published standard includes annexes with details for special applications.

Scope

This European standard specifies requirements for single-axis hinges for windows and doors opening in one direction only, whose rotation axis is no more than 30mm from the face of the sash or door. It covers both fixed pin and lift-off hinges, and contains additional requirements for hinges intended for use on fire doors.

Digit 1 - Category of Use

Four categories of use are identified:

grade 1: light duty

grade 2: medium duty

grade 3: heavy duty

grade 4: severe duty

Door type	Mass kg	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0 - 10.0	Light
Light internal, large wardrobe and large louvered doors	10.0 - 17.5	Light
Medium internal doors	17.5 - 25.0	Medium
Heavy internal doors	25.0 - 37.5	Medium
Heavy external doors	40.0 - 60.0	Heavy
Oversize or special external doors	55.0 - 110.0	Heavy

Digit 2 - Durability

Three grades are identified for single-axis hinges manufactured to this European standard:

grade 3: 10,000 test cycles, for light duty hinges on windows only

grade 4: 25,000 test cycles, for light duty hinges on windows and doors

grade 7: 200,000 test cycles, for medium, heavy and severe duty hinges on doors only

Digit 3 - Test Door Mass

Eight door mass grades related to single-axis hinges are identified in this European standard as shown in the table below.

Test door mass grade	Door mass
0	10 kg
1	20 kg
2	40 kg
3	60 kg
4	80 kg
5	100 kg
6	120 kg
7	160 kg

Download Door Hinges EN Standards

Four categories of use are identified:

grade 0: not suitable for fire and smoke resistant door assemblies

grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the single-axis hinge to the fire resistance of the specified fire/smoke door assemblies.

Such assessment is beyond the scope of this European standard (see EN 1634-1)

Single-axis hinges are required to satisfy the essential requirements of safety in use. Therefore, only grade 1 is identified.

Five grades of corrosion resistance are identified in accordance with EN 1870:

grade 0: no defined corrosion resistance

grade 1: mild resistance

grade 2: moderate resistance

grade 3: high resistance

Two grades of security are identified for single-axis hinges:

grade 0: not suitable for use on burglar-resistant door assemblies

grade 1: suitable for applications requiring a degree of security. Annex C of this European standard details the hinge grade to use for the level of security required.

Fourteen grades are identified in this European standard and are detailed in the table on the right. The full classification is shown in the standard.

Hinge Grade	Usage	Test cycles	Door mass
1	Window	10,000	10 kg
2	Window	10,000	20 kg
3	Window/Door	25,000	20 kg
4	Door	200,000	20 kg
5	Window	10,000	40 kg
6	Window/Door	25,000	40 kg
7	Door	200,000	40 kg
8	Window	10,000	60 kg
9	Window/Door	25,000	60 kg
10	Door	200,000	80 kg
11	Door	200,000	80 kg
12	Door	200,000	100 kg
13	Door	200,000	120 kg
14	Door	200,000	160 kg

Certificate of Constancy of Performance

0359-CPR-00355

In compliance with Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation), this certificate¹⁴ applies to the construction product(s).

Product(s): Single axis hinges
(refer to attached appendix for details and conditions)

Placed on the market under the trade mark of: **ASSA ABLOY ITALIA S.p.A.**
Via Salvatore Quasimodo, 136, 0014 Rome, 40017, ITALY

Produced in the manufacturing plant(s): A003

Intended use: On fire/smoke compartmentation doors fitted with door closing devices (to enable such doors to close reliably and thus achieve self closing in the event of fire)

This certificate attests that all provisions concerning the assessment and verification of constancy of performance described in Annex ZA of the standard(s):

EN 1935:2002/AC:2003

Under system 1 for the performance set out in this certificate are applied and that the performance of the construction product is assessed to remain constant.

This certificate was first issued on 17 February 2015 under CPR (305/2011) and updated on 26th November 2015 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

The issued document and statement(s) herein makes reference only to a presumption of conformity in accordance with the CPR Regulations EU 305/2011 (as amended). However, it is the manufacturer's or their authorised representative's sole responsibility to affix the CE logo and, by doing so, confirms full compliance and conformity to all other European mandatory directives and regulations that may also apply.

Table A2. Product classification for single axis hinges (EN 1935:2002/AC:2003) from ASSA ABLOY ITALIA S.p.A.^a

Product Classification							
4	7	6	1 ^b	1	4	0	13

Notes.

- a. The single axis hinges shall be installed in accordance with the installation instructions for the product(s).
b. Digit 4 grade "1" was based on the test result from fire resistance test(s) (refer to Table A4).
c. This certificate of constancy of performance, refers to the requirements for the product(s) described under the CPR. There may be other European Directives, where requirements need to be declared before CE marking can be affixed by the manufacturer or their authorised representative

Supporting test reports for this certificate are as follows:

Table A3. Mechanical test reports & product classification for hinges from ASSA ABLOY ITALIA S.p.A..

Test Report	Model tested	Product Classification							
151106043GZU-001	102X76X3mm	4	7	6	a —	1	4	0	13
	114X114x3.5mm								
Model numbers assessed as having same performance: Models in Table A1above.									
Notes. a. Digit 4 becomes "1" after successful outcome of fire resistance test (refer to Table A4).

Intertek

Table A5. Single axis hinges (EN 1935:2002/AC:2003) according to the Annex ZA, Table ZA.1.

Product:	Single-axis hinges as defined in clause 1 of this standard.	
Intended uses:	On fire/smoke compartmentation doors fitted with door closing devices (to enable such doors to close reliably and thus achieve self closing in the event of fire)	
Requirement / characteristic	Requirement clauses in this European Standard	Results
Self closing	5.1 Initial friction torque	Less than 4,0 Nm with door mass 120 kg
	5.2 static Load - Load deformation	Pass with a displacement under load: - Lateral < 4 mm; - Vertical < 2 mm And a residual displacement after unloading: - Lateral < 0,2 mm; - Vertical < 0,3 mm
	5.2 static Load - Overload	Pass
	5.3 Shear strength	Pass No breakage and cracking Lateral deformation under loading < 3 mm Additional lateral and vertical displacement after unloading < 1 mm
	5.6 Hinges for use on fire-resistant and/or smoke-control doors	Grade 1: suitable for use on fire/smoke resistant door assemblies
Durability	5.4 Durability	Pass (200,000 cycles) Maximum wear: - Lateral < 0,2 mm - Vertical < 1 mm Maximum frictional torque: - After 20 cycles and completion of 200,000 cycles less than 4,0 Nm.
	5.5 Corrosion resistance	Grade 4, Neutral Salt Spray (NSS) – 240 hours
Dangerous substances	Note 1 of ZA 1	No dangerous substances declared for this product/intended use

SS 304 Hinges
Stainless steel butt hinges

High quality stainless steel butt hinges.

Specifications:

- Butt hinge with ball bearings
- Stainless steel AISI 304
- Square corners
- Can be used on doors up to 120 kg

Features:

- CE marked
- Tested to EN 1935:2002 class 13
- Suitable for fire and smoke resistant doors, tested to EN 1634-1:2014

Available in Stainless Steel Matt, Stainless Steel Polish and Polished Brass finishes

Hinge Size	Dimensions		
	A	B	C
4" x 3" x 3mm	102mm	76mm	3mm

Screw set guide

Metal door screws*
(to be purchased seperately)

Door Closers

In order to close the door in a controlled speed, a door closer is used in order to prevent the door from slamming. Yale door closers come with speed controls and fire rating for best performance under all circumstances.

Rack & Pinion Technology

- Rack and Pinion is the mechanism used on Yale range of door closers
- As the door is opened, the arm is pulled around, rotating the pinion
- The pinion runs through the door closer body and its teeth engage with the teeth of a rack in a piston
- As the arm rotates the pinion, it in turn drives the piston down the cylinder bore
- The piston compresses the spring lying in the cylinder bore
- The energy used to open the door is stored in the spring and when the door is released the spring begins to expand which puts the process in reverse and the door closes
- The speed of closing is controlled by the hydraulic fluid in the system. It flows unrestricted in one direction as the door is opened but it has to make the return journey through valves
- These valves can be adjusted to control the rate of flow, and this governs the closing and latching speed

Door Closer Speed Checks

- a Closing speed**
The exact setting of the closing speed guarantees a controlled closing of the door leaf.
- b Latching action**
The latching action controls the closing of the door and ensures the lock closes reliably. Therefore the door closer increases the speed of the door. The hydraulic latching action is reducing the speed of the door to achieve a softer closing of the door.

- Standard installation**
(Door leaf installation) on the pull side
- Overhead installation**
(Transom fixing) on the push side
- Parallel arm installation**
On push side

* parallel arm to be purchased separately

BS EN Standards for Controlled Door Closing Devices

Standards

There are two standards currently in existence for door closing devices:

EN 1154:1997 - Mechanical closers

EN 1155:1997 - Electronically controlled closers

EN 1154:1997 - Controlled door closing devices - requirements and test methods

Scope

The standard covers all controlled surface mounted, concealed, or transom mounted closers.

Attention should be paid to Digit 3, which deals with the power size and door width.

Download Door Closer EN Standards

Classification

Digit 1 - Category of use

For all internal and external doors for use by the public, and others, with little incentive to take care, i.e. where there is some chance of misuse of the door.

Grade 3: For closing doors from at least 105° open

Grade 4: For closing doors from 180° open

Note 1: Grade 4 classification assumes standard installation according to the manufacturer's instructions.

Note 2: For applications subject to extremes of abuse, or for particular limitations of opening angle, door closers incorporating backcheck function or provision of a separate door stop should be considered.

Digit 2 - Number of test cycles

Only one test duration is identified for the door closing device manufactured to this standard:

Grade 8: 500,000 cycles

Digit 3 - Test door mass/size

Seven test door mass grades and related door closer power sizes are identified according to below table of this standard. Where a door closer provides a range of power sizes both the minimum and maximum sizes shall be identified.

Test door mass and recommended door widths		
Power size of closer	Max. mass of leaf	Width of test door leaf
1	20 kg	<750mm
2	40 kg	850mm
3	60 kg	950mm
4	80 kg	1,100mm
5	100 kg	1,250mm
6	120 kg	1,400mm
7	160 kg	1,600mm

Digit 4 - Fire behaviour

Grade 0: Not suitable for use on fire/smoke door assemblies

Grade 1: Suitable for use on fire/smoke door assemblies, subject to satisfactory assessment of the contribution of the emergency device to the fire resistance of specified fire/smoke door assemblies

Digit 5 - Safety

All door closers are required to satisfy the Essential Requirement of safety in use contained in the Construction Products Directive by the EU. Therefore only **Grade 1** is identified.

Digit 6 - Corrosion resistance

Five grades are identified according to EN 1670:

Grade 0: No defined corrosion resistance

Grade 1: Low resistance

Grade 2: Moderate resistance

Grade 3: High resistance

Grade 4: Very high resistance

Classification Code

3:8:2/5:0:1:0

EXAMPLE:

The following marking denotes a closer capable of opening to at least 105°, and with a range of power sizes from size 2 to size 5. Note that as the 4th digit is zero, such a closer would not be suitable for fire door use.

Fire Resistant Doors

EN 1154 makes the following recommendations as to the feature considered necessary for such devices when they are fitted to fire and smoke resisting doors.

- a The door closer when installed in accordance with the manufacturer's installation instruction shall be capable of closing the test door from any angle to which it may be opened.
- b Due to their low closing moments, door closers sizes 1 and 2 are not considered suitable for use on fire/smoke resisting door assemblies. Door closers with adjustable closing force shall be capable of adjustment to at least power size 3.
- c The door closer shall not include a hold open device unless it is electrically powered device in accordance with EN 1155.

- d Control regulators shall be either concealed or operable only by means of a tool.
- e The design of a door closer shall be such that it is not possible to inhibit its closing action in any way without the use of a tool.
- f Any incorporated delayed action function shall be capable of adjustment to less than 25 seconds between the door closing angle of 120° and the end of the delay zone.
- g The door closer representative of its model shall have been incorporated in a door assembly that has satisfied the appropriate criteria of a fire test. The test shall have been on a full size assembly in accordance with EN 1634-1.

CE conformity

Fire resistance and smoke control

Where a door closing device has a CE certificate of conformity, this will be shown. Hence, it is stated in 8300 that all fire doors must have closing devices that are CE marked.

- F Tested for fire resistant and smoke control doors.
- X The use of a hold open device on fire resistant and smoke control doors are not permitted or they are not tested for resistance and smoke control.

We give below a guide to the terminology used in connection with door closing devices.

Backcheck

A device built into the closer that checks the outward swing of the door. The backcheck damping is inversely proportional to the speed of the outward swing of the door. It should not be regarded as a door stop.

Closing speed

The speed with which the door is closed. Normally adjustable.

Closing force

The power that the closer exerts to close the door. Measured in the EN standard from 1-6. See table below.

Latching action

The door movement becomes accelerated in the last few degrees of closing, in order to be able to overcome any resistance, such as seals, latch bolts, etc.

Delayed action

The closing speed of the door is reduced to minimal or the door stops, for a preset period, to allow passers-by sufficient time to pass through the door opening. i.e. elderly persons, hospital staff with beds, etc.

Hold open

This is a device to enable the closer to be held in the open position, usually at 90°, but some are variable in the opening degree. These closers must not be used on fire doors (except where they are electronically controlled to close when the fire alarm is sounded).

Door stops

Always use a door stop, where practicable, whether a closer has a backcheck or not. This may take the form of a floor mounted version, wall/skirting mounted version or built-in as found with guide rail closers. The positioning of the stop is also important, and must be at least 66% (2/3rds) the door width away from the hinge, otherwise the stop acts as a fulcrum and could damage the door, the frame and the hinges. Where there is a maximum angle of opening stated the stop must be positioned at that point, otherwise damage to the closer will occur.

Note

Please ensure that the correct closing device is the appropriate one for the job it is intended to do and that it is the correct size. Too many closers are under specified, purely in an effort to reduce costs.

Size	Max. door width mm	Min. closing moments N.m
1	750	9
2	850	13
3	950	18
4	1100	26
5	1250	37
6	1400	54

It should be noted that size 3 is the minimum requirement for fire doors.

Certificate of Constancy of Performance for Door Closers 4000 series

Notified body No. 1121
Warrington Certification Limited, Holmesfield Road, Warrington, Cheshire, WA1 2DS, UK

Certificate of constancy of performance

1121-CPR-AD5100

In compliance with Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation or CPR), this certificate applies to the construction product

Yale 4000 Series Overhead door closer

Intended use: For use on fire rated single leaf and double leaf doors

K/002

This is coded form and the information is held by the Notified Body.

This certificate attests that all provisions concerning the assessment and verification of constancy of performance and the performances described in Annex ZA of the standard(s)

EN 1154:1996/A1:2002/AC:2006

under system 1 of AVCP are applied and that

The product fulfils all the prescribed requirements set out above.

This certificate was first issued on 12/09/13 and will remain valid as long as the test methods and/or factory production control requirements included in the harmonised standard, used to assess the performance of the declared characteristics, do not change, and the product, and the manufacturing conditions in the plant are not modified significantly.

Registered office: Lochend Industrial Estate, Newbridge, Midlothian, EH28 8PL, UK. Registered in Scotland, No. SC 70429

Certificate of Constancy of Performance for Door Closers 5000 series

Certificate of constancy of performance

1121-CPR-AD5101

Produced for

Yale EMEA
School Street, Willenhall, West Midlands, WV13 3PW

and produced in the manufacturing plant

K/002

This is coded form and the information is held by the Notified Body.

This certificate attests that all provisions concerning the assessment and verification of constancy of performance and the performances described in Annex ZA of the standard(s)

EN 1154:1996/A1:2002/AC:2006
under system 1 of AVCP are applied and that

The product fulfils all the prescribed requirements set out above.

This certificate was first issued on 12/09/13 and will remain valid as long as the test methods and/or factory production control requirements included in the harmonised standard, used to assess the performance of the declared characteristics, do not change, and the product, and the manufacturing conditions in the plant are not modified significantly.

- Specifications:**
- Forged aluminum body
 - CE marked
 - Non-handed installation

- Features:**
- Rack and Pinion mechanism
 - Selectable EN size 2, 3 & 4
 - Max door width: 1100mm
 - Max door weight 80kg
 - Adjustable closing and latching speed
 - A built-in pressure relief valve protects the closer against abuse
 - Can be installed with standard or hold open arm and parallel arm bracket
 - Hold open type should not be installed on fire doors
 - Available in silver, white, brown, black & gold

Lever Handles

Lever handles are used both as a decorative piece and for the smooth operation of the door lock. Yale offers a wide variety of lever handles in stainless steel, brass, zinc alloy and aluminium material, available in different surface finishes.

Criteria for Lever Handle Selection

Aesthetics

If the architect is using curves in the overall design, and in features such as vision panels in the doors, square-section levers and rectangular back plates will be a mismatch.

Is it the right thickness and weight?

High end specifications require a good solid feel.

Other projects might only need lighter pattern handles.

What finishes are available?

In some projects there might be a need for colored door furniture, or maybe brass or polished chrome. The important/public parts of the building might have expensive finishes, and the “back of house” non-public areas might have the same lever design but in a regular finish.

Are the fixings concealed or exposed?

- Most commercial grade furniture has concealed fixings to prevent tampering or unauthorized removal.
- Low cost housing furniture might have exposed fixings.

Functionality

- Suitable for the type of use it will get?
- Corrosion resistance?
- Is durability an issue?
- Does the lever stop your hand from sliding off?
Could it catch on sleeves or loose clothing as you walk by?
- What kind of fixings are needed?
- Will simple screw-fixing be enough, or should the furniture be back-to-back fixed with through-bolts, in order to survive heavy duty use?

Ways to Operate a Door

Door hardware is a general term used for products which are fixed to doors to enable or enhance their function.

Door furniture (levers and knobs) includes below types of fittings:

- pull handles
- protection plates
- front door furniture
- door stops

Door furniture is a term used to describe hardware that is surface-mounted on the door, and which is used to open or close the door.

Lever Handle Installation Guide

1

Prepare Door

- Determine your nominated handle position vertically using a tape measure.
- Then, draw a horizontal centerline using a spirit level at desired height - this line should extend inwards at least 80mm from door edge.
- Repeat above steps on opposite door side, door end-face and door frame.

We suggest between 900-1050mm for typical new plain door installations.

2

Prepare Screws

- Cut screws appropriate to door thickness
- Ensure the screw does not stick out of the rose once installed.

3

Install Lever Sets

- Place the spindle and springs (if required) into the latch as shown.
- Install each half set, ensuring you have levers springing downwards.
- Insert two cut off screws of correct length through holes at 9 and 3 o'clock positions and tighten.
- The two remaining woodscrews can be positioned at the 12 and 6 o'clock positions for added strength.

4

Install Outer Rose Cover

- Install the outer rose cover over the inner rose by sliding it over the lever.
- Attach round rose covers by screwing onto the inner rose.

For square covers only: Grub screw should be located on the bottom of the rose cover when placed on the door.

BS EN 1906

Building Hardware - Lever handles and knob furniture

This standard details performance requirements and test methods in relation to corrosion resistance, security and other aspects pertaining to the application of lock latch furniture.

Scope

The European standard specifies the performance requirements and test methods (i.e. durability, static strength, operating torque, corrosion, safety, etc.) for sprung and unsprung lever handles and knobs for doors on backplates or roses. It applies only to lever handles and knobs that operate a lock or latch. The standard has 4 grades of performance. Compliance with the standard ensures a margin of strength in excess of that needed for normal operation. The standard has additional graded safety requirements where a high risk of falling exists.

Classification

BS EN 1906 classifies door furniture by using an 8 digit coding system. A similar classification applies to all building hardware product standards so that complementary items of hardware can be specified to, for instance, a common level of corrosion resistance, category of use, etc. Each digit refers to a particular feature of the product measured against the standard's performance requirements.

The icon above is for a product which meets Grade 2 in the category of Use classification, where EN 1906 stipulates a range of four possible grades from 1 to 4.

Digit 1 - Category of use

Four grades are identified:-

- Grade 1:** medium frequency of use with a high incentive to exercise care and a small chance of misuse, e.g. internal residential doors;
- Grade 2:** medium frequency of use by people with some incentive to exercise care but where there is some chance of misuse, e.g. internal office doors;
- Grade 3:** high frequency of use by public or others with little incentive to exercise care and with a high chance of misuse, e.g. public office doors;
- Grade 4:** high frequency of use on doors which are subject to frequent violent use, e.g. football stadiums, oil rigs, barracks, public toilets, etc.

Digit 2 - Durability

Two grades of durability are identified:

- Grade 6:** medium use - 100,000 cycles
- Grade 7:** high use - 200,000 cycles

The tests undertaken to achieve these grades involve the application of additional forces to the door furniture in order to simulate the conditions of use likely to be experienced in the field.

Digit 3 - Test Door Mass

No requirement

Digit 4 - Fire resistance

Two grades of fire resistance are identified:-

- Grade 0:** not approved for use on fire/smoke door assemblies
- Grade 1:** suitable for use on fire/smoke door assemblies.

Note:

A Grade 1 classification means only that the furniture has been designed for use on fire/smoke control doors; the actual fire performance achieved (e.g. fire integrity of 30 minutes on a partially glazed timber door etc.) will be contained in a separate fire test report.

Digit 5 - Safety

Two grades of safety are identified:-

- Grade 0:** normal use
- Grade 1:** safety application - to qualify for this grade, handles must have high strength handle-to-plate and plate-to-door fixing and/or handle-to-spindle fixing, such that they would withstand a person grabbing in order to prevent falling. It is recommended that only Safety Grade 1 furniture is used at the top of cellar steps or other staircases.

Digit 6 - Corrosion resistance

Five grades are identified according to EN 1670:-

- Grade 0:** no defined corrosion resistance
- Grade 1:** mild resistance - minimum requirement for internal use-grade 2: moderate resistance
- Grade 3:** high resistance - minimum requirement for external use
- Grade 4:** very high resistance - recommended for use in exposed marine atmospheres or very polluted industrial environments.

Note:

Products intended to develop a natural patina (such as bronze or brass) are not required to comply with any requirements.

Digit 7 - Security

Four grades are identified:-

- Grade 0:** not approved for use on burglary resistant doors
- Grade 1:** mild burglary resistance
- Grade 2:** moderate burglary resistance
- Grade 3:** high burglary resistance-grade 4: extra high burglary resistance

Note:

The main requirements include resistance to drilling, close fitting plates or escutcheons to help protect the lock and support the cylinder. They must be resistant to removal from the outside of the door and make provision to minimize the cylinder projection to a maximum of 3mm. Full details of the requirements can be found in BS EN 1906.

Digit 8 - Types of operation

Three operation types are identified:-

- Type A:** spring assisted furniture
- Type B:** spring loaded furniture
- Type U:** unsprung furniture

The following marking denotes a lever handle for high frequency use on a door that is also subject to frequent violent usage. There is no classification for door mass, but it is suitable for use on fire/smoke door assemblies, and for where safety is important. It has a very high corrosion resistance suitable for external doors. It has high burglarly resistance and is of the unsprung type.

Apollo

- Specifications:**
- Aluminium lever with spring mechanism
 - Zinc alloy rosette and escutcheon Ø54x9mm
 - Electroplated finishes
 - Spindle (8x8mm) and fixings included
 - Spindle with secure grub screw fixing

- Features:**
- Suitable for locks with 8mm square hub
 - Rosette with threaded base and cover
 - Satin nickel and antique brass finishes
 - Suitable for doors 35-50mm thick
 - Recommended for internal doors

Zinc Alloy Handles

- Specifications:**
- Zinc alloy lever with spring mechanism
 - Electroplated finishes
 - Spindle (8x8mm) and fixings included
 - Spindle with secure grub screw fixing

- Features:**
- Suitable for locks with 8mm square hub
 - Rosette with threaded base and cover
 - Suitable for doors 35-50mm thick
 - Recommended for internal doors

Brass Handles

- Specifications:**
- Brass designer lever with spring mechanism
 - Electroplated finishes
 - Spindle (8x8mm) and fixings included
 - Spindle with secure grub screw fixing

- Features:**
- Suitable for locks with 8mm square hub
 - Rosette with threaded base and cover
 - Suitable for doors 35-50mm thick
 - Recommended for internal doors

Stainless Steel Pull Handles

Single H pull handle - Back fixing

- Specifications:**
- AISI grade 304
 - H-shape, back fixing

Panic Exit Devices

Panic exit devices play an important role in situations when people need safe and quick access through a doorway, with minimum effort possible. Yale offers two variants in this category – push bar and touch bar PED, which are available in elegant red, grey, black and steel finishes, and are suitable for non-handed door application.

BS EN Standards for PED

BS EN 179 - Emergency Exit Devices

This standard covers devices to be used in emergency situations where people are familiar with the emergency exit and it's hardware and therefore a panic situation is most unlikely to develop. Devices operated by a lever handle or push pad may therefore be used.

BS EN 1125 - Panic Exit Devices

Experience relating to escape from buildings and general safety have made it desirable that doors at final exits in public buildings, places of entertainment, shops, etc. should be fitted with panic devices operated by a horizontal bar. The emphasis for products covered by this standard is on safe exit rather than security.

These standards provide details on product types, classification by use, test cycles, door mass, corrosion resistance, as well as definitions, product performance requirements, test apparatus, test methods and marking of products. In addition, the published standards include annexes illustrating the various points made through diagrams and supplementary text.

BS EN 179 - Scope

The main purpose of the performance requirements of this standard is to give safe and effective escape through a doorway with one single operation to release the device. However, escape can require prior knowledge of the operation of the device which is consequently considered suitable for locked doors on escape routes only where panic situations are not foreseen.

Type A: Emergency device lever handle
Type B: Emergency device push pad

BS EN 1125 - Scope

The main purpose of the performance requirements of this standard is to give safe and effective escape through a doorway with minimum effort and without prior knowledge of the device, i.e. for locked doors on escape routes where panic situations can be foreseen.

Classification

BS EN 1125 and BS EN 179 classify panic and emergency exit devices by using a 10 digit coding system. A similar classification applies to all building hardware product standards so that complementary items of hardware can be specified to, for instance, a common level of corrosion resistance, category of use, etc. Each digit refers to a particular feature of the product measured against the standard's performance requirements.

Download
PED EN Standards

The icon above is for a product which meets Grade 3 in the category of use classification, where EN 1125 and EN 179 stipulate only grade 3.

Digit 1 - Category of use

Only one category is identified, that being
Grade 3: High frequency of use by public and others with little incentive to exercise care.

Digit 2 - Number of test cycles

Two categories of durability are defined:
Grade 6: 100,000 cycles
Grade 7: 200,000 cycles

Digit 3 - Test door mass

Three categories of test door mass are identified:
Grade 5: up to 100 kg
Grade 6: up to 200 kg
Grade 7: over 200 kg

Digit 4 - Fire resistance

Three categories of fire door resistance are identified:
Grade 0: Not approved for use on fire/smoke door assemblies
Grade A: Suitable for use on smoke door assemblies, subject to satisfactory assessment of the contribution of the panic/emergency device to the smoke resistance of specified smoke door assemblies

Grade B: Suitable for use on fire/smoke door assemblies, subject to satisfactory assessment of the contribution of the panic/emergency device to the fire resistance of specified fire/smoke door assemblies.

Such assessments are outside the scope of this European standard (see EN 1634-1)

Digit 5 - Safety

All panic and emergency devices have a critical safety function therefore only the top **Grade1:** is identified.

Digit 6 - Corrosion resistance

Two grades of corrosion resistance are identified according to EN 1670:
Grade 3: high resistance (96 salt spray hours)
Grade 4: very high resistance (240 salt spray hours)

Digit 7 - Security

Products covered by BS EN 179 have 4 identified categories and generally have the opportunity of greater security against forced opening than devices covered by BS EN 1125.

BS EN 179

Grade 2: 1000 N
Grade 3: 2000 N
Grade 4: 3000 N
Grade 5: 5000 N

BS EN 1125

Only one category of security is identified:
Grade 2: 1000 N panic devices are primarily for the operation of a door from the inside. Safety considerations will always be given priority over security.

Digit 8 - Projection of device

Two grades are identified relating to the projection of the device from the door face:

Grade 1: projection up to 150 mm (large projection)

Grade 2: projection up to 100 mm (standard projection)

Digit 9 - Type of device

Two categories are identified for each standard: BS EN 179

Type A: emergency device with lever handle operation

Type B: emergency device with push or pull pad operation

Type A: panic device with push bar operation

Type B: panic device with touch bar operation

Digit 10 - Field of application

EN 179

A: Outward opening - Single & double exit doors, active & inactive leaf

B: Outward opening - Single exit door only

C: Outward opening - Double exit door, inactive door

D: Inward opening - Single exit only

EN 1125

A: Outward opening - Single & double exit doors; active & inactive leaf

B: Outward opening - Single exit door only

C: Outward opening - Double exit door; inactive door

Example

The following marking denotes a panic exit device tested to 200,000 operations for a door mass up to 200 kg, suitable for fire door use with very high corrosion resistance with standard bar projection for use on single & double doors.

Features		429 Series PED	445 Series Single Point & 445 Series Multi Point	Millenium Series Single Point & Millenium Series Double Point
Push bar material		Aluminium	Aluminium	Aluminium
Head cover material		Steel	Steel	Zinc alloy

Accessories for Panic Exit Devices

Jolly handle kit with cylinder

- Specifications:**
- External Rim handle Kit with cylinder included
 - Panic exit bar can be operated externally by the handle. The cylinder locks/unlocks the handle

- Features:**
- Suitable for Push 455, Star 464 panic exit devices
 - Black and stainless steel finishes available

Mortice Locks

Yale offers a diverse range of door locking solutions, with mortice locks that are perfectly suitable for residential doors like entrance and internal doors, as well as common area doors like fire exit and double leaf doors. Using high quality stainless steel and ensuring high precision throughout the manufacturing process, Yale guarantees exceptional durability, security and performance for its locks.

Mortice Locks

Door direction

Depending on the pivot direction of a door, a door is classified as a left and right hand door. The door direction or side definition according to DIN 107 is determined as follows:

Visible position of the door hinges on the left = DIN left

Visible position of the door hinges on the right = DIN right

In accordance with the door directions, the mortice locks are also classified as DIN left and DIN right hand locks:

DIN left hand lock
(the straight side
of the latch points
to the left)

DIN right hand lock
(the straight side
of the latch points
to the right)

Profile of a rebated door with mortice lock
(forend protruding on one side)

Profile of a flush door with mortice lock
(forend protrudes on both sides)

Parts of Motice Lock

- 1 Forend
- 2 Latch
- 3 Deadbolt
- 4 Screw channel for profile cylinder
- 5 Tumbler
- 6 Tumbler spring
- 7 Key action
- 8 Lever follower
- 9 Counter spring

- a Backset
- b Distance
- c Case height
- d Case width
- e Forend length
- f Forend width

Scope:
This standard covers the requirement and test methods for durability, strength, security and function of all types of mechanical locks and latches (including associated or separately locking plates), intended for use on pedestrian doors in buildings. Excluding electro-mechanically operated locks and striking plates, multipoint locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks.

Classification:
The standard classifies locks and latches using the 11 digit coding system. Each digit relates to a particular feature of the product measured against the standards performance requirements.

BS EN Standards for Mortice Locks

Digit 1: Category of use
Classification is in three grades, grade 1 being the lowest

- Grade 1:** Low frequency. For use by people with a high incentive to exercise care and a small chance of misuse, e.g internal residential doors.
- Grade 2:** Medium frequency. For use by people with some incentive to exercise care but where there is some chance of misuse, e.g. internal office doors.
- Grade 3:** High frequency. For use by public or others with little incentive to exercise care and with a high chance of misuse, e.g. public doors.

Digit 2: Durability
Twelve grades of durability are identified:

- Grade A:** 50,000 cycles, no load on latch bolt
- Grade B:** 100,000 cycles, no load on latch bolt
- Grade C:** 200,000 cycles, no load on latch bolt
- Grade F:** 50,000 cycles, 10N load on latch bolt
- Grade G:** 100,000 cycles, 10N load on latch bolt
- Grade H:** 200,000 cycles, 10N load on latch bolt
- Grade L:** 100,000 cycles, 25N load on latch bolt
- Grade M:** 200,000 cycles, 25N load on latch bolt
- Grade R:** 100,000 cycles, 50N load on latch bolt
- Grade S:** 200,000 cycles, 50N load on latch bolt
- Grade W:** 100,000 cycles, 120N load on latch bolt
- Grade X:** 200,000 cycles, 120N load on latch bolt

Digit 3 - Door mass and closing force
Nine grades of door mass and closing force are identified:

- Grade 1:** Up to 100 kg door mass; 50N maximum closing force
- Grade 2:** Up to 200 kg door mass; 50N maximum closing force
- Grade 3:** Up to 200 kg door mass or specified by the manufacturer; 50N maximum closing force
- Grade 4:** Up to 100 kg door mass; 25N maximum closing force

- Grade 5:** Up to 200 kg door mass; 25N maximum closing force
- Grade 6:** Up to 200 kg door mass or specified by the manufacturer; 25N maximum closing force
- Grade 7:** Up to 100 kg door mass; 15N maximum closing force
- Grade 8:** Up to 200 kg door mass; 15N maximum closing force
- Grade 9:** Up to 200 kg door mass or specified by the manufacturer; 15N maximum closing force

Digit 4 - Fire resistance
Two grades of suitability for use on fire/smoke doors are identified:

- Grade 0:** Not approved for use on fire/smoke door assemblies
- Grade 1:** Suitable for use on fire/smoke door assemblies tested to EN 1634-1 etc.
- Note 1:** A grade 1 classification means only that the lock has been designed for use on fire/smoke control doors; the actual fire performance achieved (e.g. fire integrity of 30 minutes on a partially glazed timber door etc.) will be contained in a separate fire test report.
- Note 2:** Where a product is intended for fire/smoke use (i.e. “1” in box 4), it must be possible to demonstrate compliance with the Essential Requirements of the Construction Products (Amendments) Regulations. It is recommended that the product should bear the CE mark.

Digit 5: Safety
Only one grade of safety is identified:
Note: A lock or latch conforming to this standard can, at the same time, also be part of an exit device conforming to EN 179 or EN 1125

Digit 6 - Corrosion resistance and temperature
Eight grades of corrosion resistance are identified:

- Grade 0:** No defined corrosion resistance; no temperature requirement
- Grade A:** Low corrosion resistance; no temperature requirement
- Grade B:** Moderate corrosion resistance; no temperature requirement
- Grade C:** High corrosion resistance; no temperature requirement
- Grade D:** Very high corrosion resistance; no temperature requirement
- Grade E:** Moderate corrosion resistance; temperature requirement: from -20°C to +80°C
- Grade F:** High corrosion resistance; temperature requirement: from -20°C to +80°C
- Grade G:** Very high corrosion resistance; temperature requirement: from -20°C to +80°C

Digit 7 - Security and drill resistance
Seven grades of security and drill resistance are identified:

- Grade 1:** Minimum security and no drill resistance
- Grade 2:** Low security and no drill resistance
- Grade 3:** Medium security and no drill resistance
- Grade 4:** High security and no drill resistance
- Grade 5:** High security with drill resistance
- Grade 6:** Very high security and no drill resistance
- Grade 7:** Very high security with drill resistance

Download Mortice Lock EN Standards

Digit 8 - Field of door application

Fifteen grades of door application are identified in the table below:

Grade	Type	Application 1	Application 2	Application 3
A	Mortice	Unrestricted application	–	–
B	Mortice	Hinged door	–	–
C	Mortice	Sliding door	–	–
D	Rim	Unrestricted application	–	–
E	Rim	Hinged door	–	–
F	Rim	Sliding door	–	–
G	Bored lock	Unrestricted application	–	–
H	Mortice	Hinged door	Supported	–
J	Rim	Hinged door	Inwards	–
K	Mortice	Hinged door	–	Locked from inside
L	Mortice	Sliding door	–	Locked from inside
M	Rim	Hinged door	–	Locked from inside
N	Rim	Sliding door	–	Locked from inside
P	Mortice	Hinged door	Supported	Locked from inside
R	Rim	Hinged door	Inwards	Locked from inside

Digit 9 - Type of key operation and locking

Nine grades of type of key operation and locking are identified:

- Grade 0: Not applicable
- Grade A: Cylinder lock or latch; manual locking
- Grade B: Cylinder lock or latch; automatic locking
- Grade C: Cylinder lock or latch; manual locking with intermediate locking
- Grade D: Lever lock or latch; manual locking
- Grade E: Lever lock or latch; automatic locking
- Grade F: Lever lock or latch; manual locking with intermediate locking
- Grade G: Lock or latch without key operation; manual locking
- Grade H: Lock without key operation; automatic locking

Digit 10 - Type of spindle operation

Five grades of spindle operation are identified:

- Grade 0: Lock without follower
- Grade 1: Lock with sprung lever or knob
- Grade 2: Lock with light unsprung lever
- Grade 3: Lock with heavy unsprung lever
- Grade 4: Lock with manufacturer’s own specification furniture

Digit 11 - Key identification

Nine grades of key identification are identified:

- Grade 0: No requirement
- Grade A: Minimum three detaining elements
- Grade B: Minimum five detaining elements
- Grade C: Minimum five detaining elements, extended number of effective differs
- Grade D: Minimum six detaining elements
- Grade E: Minimum six detaining elements, extended number of effective differs
- Grade F: Minimum seven detaining elements
- Grade G: Minimum seven detaining elements, extended number of effective differs
- Grade H: Minimum eight detaining elements, extended number of effective differs
- Note: This applies only to lever locks: cylinders are assessed to BS EN 1303: 1998

Classification code:
2:H:5:1:0:E:5:A:F:2:C

Code shown using DHF graphic icons:
EN 12209

Example:
This indicates a mechanically operated lock and locking plate intended for use in situations where there is an incentive to exercise care; that will withstand a durability of 200,000 cycles with 10N side load on the latch bolt on a door of up to 200 kg in mass; that will close with a maximum force of 25N; that is suitable for use on a fire/smoke resisting door; that has no safety requirement; that has moderate corrosion resistance over a temperature range of -20°C to +80°C; that has high security and drill resistance; that is suitable for unsprung furniture; and that has five detaining elements with a minimum of 10,000 differs.

1

Refer to Product Dimensions to Know the Cut-out Marks

2

Mark The Drill Holes And Cut-out Marks

3

Prepare Cavity

4

Mount the Lock

5

Install and Fix Lock

C Series
72mm Sashlock

Specifications:

- Sashlock with 72mm center distance
- Backset 55mm with option of 60mm on request
- Follower 8x8mm
- Through fixing holes with 38mm center distance
- Stainless steel 304 front and strike plate
- Square front and strike plate with option of radius type on request
- Steel latch and deadbolt
- 20mm double throw deadbolt
- Grade 8
- Door mass upto 200 Kg at max. closing force of 15N
- 200,000 cycles tested

Features:

- Tested to EN 12209:2003/AC 2005 - suitable for public doors
- CE certified - suitable for fire doors. Fire Rated 240 minutes for metal doors and 120 minutes for timber doors
- Latch operated by handle or cylinder
- Reversible for left or right hand doors

- Backset 55mm with option of 60mm on request
- Follower 8x8mm
- Through fixing holes with 38mm center distance
- Stainless steel 304 front and strike plate
- Square front and strike plate with option of radius type on request
- Steel latch
- Grade 7
- Door mass upto 100 Kg at max. closing force of 15N
- 200,000 cycles tested

Features:

- Tested to EN 12209:2003/AC 2005 - suitable for public doors
- CE certified - suitable for fire doors. Fire Rated 240 minutes for metal doors and 120 minutes for timber doors
- Latch operated by handle only
- Reversible for left or right hand doors

C Series
72mm Nightlatch

Specifications:

- Nightlatch with 72mm center distance
- Backset 55mm with option of 60mm on request
- Follower 8x8mm
- Through fixing holes with 38mm center distance
- Stainless steel 304 front and strike plate
- Square front and strike plate with option of radius type on request
- Steel latch

Features:

- Tested to EN 12209:2003/AC 2005 - suitable for public doors
- CE certified - suitable for fire doors. Fire Rated 240 minutes for metal doors and 120 minutes for timber doors
- Latch operated by handle or cylinder
- Reversible for left or right hand doors

Classica

Lock Series

85mm Sashlock

Specifications:

- Lock case with 85mm center distance
- Standard backset 45mm - other backsets available on request
- Follower 8x8mm
- Through fixing holes with 38mm center distance for rosette handles
- Brass latch and steel deadbolt
- Steel front and strike plate with option of stainless steel
- 20mm double throw deadbolt

Features:

- Finish options - satin nickel, polished brass, antique brass or satin stainless steel
- Latch and deadbolt finish matched with front plate
- Latch operated by handle or cylinder

Cylinders

Not a very well-known fact, but a door lock brings only 50% security to your door. The rest 50% is looked after by your door cylinder. Even if you're sure your lock is secure, your home security might still be at risk – and changing your cylinder can help eliminate this risk.

Listed below are some of the many reasons why you should consider changing your existing door cylinders to a high quality Yale cylinder.

- You moved into a new house or apartment
- If you've ever lent someone your key
- You've lost your keys
- Your child has lost a key or let a friend borrow it
- It's a great opportunity to improve lock security
- You've experienced a break in or attempted break-in
- Your locks are worn, old and difficult to use
- You have carried out other home improvements
- Total peace of mind

Cylinder Type

Cylinder Components

- 1. Core
- 2. Core pin
- 3. Locking pin with spring
- 4. Housing pin with spring
- 5. Cylinder housing

Application

Locking Cylinders are categorized according to:

How to Measure your Cylinder

How to Change your Cylinder

BS EN Standards for Cylinders

Specification

BS EN 1303: 2005 classifies cylinders for locks using an 8 digit coding system. Abroadly similar classification system is used for other building hardware product standards. Each digit refers to a particular feature of the product measured against the standard's performance requirements.

Download Cylinder
EN Standards

Digit 1 Category of use

One category is identified:

Grade 1: Keys shall resist a torque of 2.5Nm and still be usable.

Digit 2 Durability

Three grades are identified according to the number of test cycles achieved:

Grade 4: 25,000 cycles

Grade 5: 50,000 cycles

Grade 6: 100,000 cycles

Digit 3 Door mass

No requirement.

Digit 4 Fire resistance

Two grades are identified as follows:

Grade 0: not suitable for fire/smoke resistant door assemblies

Grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the cylinder to the fire resistance of the specified fire/smoke door assemblies. Such assessment is beyond the scope of this European standard (see EN 1634-1).

Digit 5 Safety

No requirement.

EXAMPLE:

The following marking denotes a cylinder meeting the required category of use Grade 1, durability Grade 6 (100,000 cycles), no requirement for door mass, no fire resistance or safety in use requirement, having Grade A corrosion resistance, Grade 4 key related security and Grade 1 attack resistance.

Digit 6 Corrosion and temperature resistance

Four grades are identified as follows:

Grade 0: no corrosion or temperature resistance requirements

Grade A: BS EN 1670 Grade 3 corrosion resistance (96 hours NSS):
no temperature resistance requirement

Grade B: No corrosion resistance requirement: resistance to -20 / +80°C temperature extremes

Grade C: BS EN 1670 Grade 3 corrosion resistance: resistance to -20 / +80°C temperature extremes

Note:

- No distinction is made between the inside and the outside of either the cylinder and/or the door.
- On completion of the test, the cylinder must operate using a maximum 1.5 Nm torque on the key.

Digit 7 Key related security

Six grades are identified and the principal requirements are summarised in the table below:

	Grade					
	1	2	3	4	5	6
Minimum number of effective differs	100	300	15,000	30,000	30,000	100,000
Minimum number of movable levers, pins, discs, etc	2	3	5	5	6	6
Coding on key could disclose combination	Yes	Yes	No	No	No	No
Torque resistance of plug	2.5Nm	5Nm	15Nm	15Nm	15Nm	15Nm

Digit 8 Attack resistance

Three grades are identified and the principal requirements are summarised in the table below:

	Grade		
	0	1	2
Resistance to drilling (net drilling time)	-	3 mins	5 mins
Resistance to chisel attack (number of defined blows)	-	30	40
Resistance to twisting attack (number of defined twists)	-	20	30
Resistance to plug/cylinder extraction (pull load)	-	15kN	15kN
Torque resistance of plug/cylinder	-	20Nm	30Nm

Double Euro Profile Cylinders 1000 Series

- Specifications:**
- Double euro profile cylinder - Key + Key, Key + Knob
 - Single euro profile cylinder - One side key
 - Medium security
 - Brass Material
 - Tested to EN 1303:2005
 - Size available from 45mm - 140mm
 - Finish available - Satin Nickel, Polished Brass, Antique Brass
 - Type: Entrance, Bedroom Function

- Key Highlights:**
- Dimple key
 - 6 pins
 - Supplied with 5 keys
 - Key code card
 - Anti drilling
 - Anti picking

Accessories

While door fittings provide additional convenience and security to your doors, it's important they aesthetically match with the rest of the door fittings. The door accessories from Yale are available in a wide range of finishes, sizes and vary in the type of functionalities they offer; while perfectly blending in with Yale's other door solutions to give your door a consistent look overall.

Door Stops

Floor mounted door stop

- Specifications:**
- AISI 304 with rubber cushion
 - Height 26.5mm x Ø44mm, 3mm rubber
 - Anchor pin and screw for floor fixing

- Features:**
- Satin finish, other finishes available on request

Wall mounted door stop

- Specifications:**
- AISI 304 with rubber cushion
 - Base Ø50x6mm
 - Total length with base and rubber 82mm, Ø19mm
 - Concealed screw fixing
